

I am requesting that you reject the NAB's petition 04-160. There is certainly no room for government interference and further regulation of satellite radio. This new technology works, it provides great content, and I pay a monthly fee to receive it. The addition of local weather and traffic enhances safety, especially when approaching city areas when you are out of range of local broadcasts. Additionally, I do not have to listen to some local "shock jock" just to get the traffic reports, which can be annoying and offensive, especially with my children in the car.

I am respectfully urging the FCC to reject the NAB's petition 04-160. Thank you,
Tom Lyon
